Character Description:

Nebula is a robot designed by NASA in the wake of Earth overpopulation to explore potentially habitable planets. He's curious but tentative as he plods around and analyzes for signs of life on OREX IV, a galaxy 6.3 million light years from the Milky Way. Despite his innocent looks, you shouldn't get on his bad side; he's fitted with the U.S. military's latest weaponry as of the year 2417.
